COMPANY PROFILE

PROFILE

Cima S.p.A. is a leading and trusted quality manufacturer of:

- Medium - heavy carpentry
- Special fittings
- High pressure pumps
- Machinery for mixing and injection pumps

The production site includes a substantial area of 27,500 m² of which 12,500 m² are indoors.

The company works closely with partners within the following industries:

- Energy
- Oil & gas
- Petrochemical
- Offshore

With a workforce of over 55 employees, its progressive development policies and a commitment to excellence, Cima S.p.A. is at the forefront of the above industries.

MISSION STATEMENT

As holder of the ASME U and ASME S accreditations and the ISO 9001:2008, Cima S.p.A. is committed through investment in technology, equipment and training to provide flexibility, customization, innovation and reliability.

HISTORY

Cima S.p.A. history was the brainchild of Pompilio Dordoni and Lodovico Necchi, who combined courage, experience and market knowledge to start their business venture.

Founded in July 1961, Cima originally dealt with carpentry and plant parts for the cement industry. In March 1977, Sicom was founded and this company specialised in the production of calendered goods. In March 1987, the two partners had the idea to set up a new company called Metax whose core business was the design and the production of machines and plants for specialised construction industries.

As a result of Cima, Sicom and Metax merging, in April 2001, Cima S.p.A. was founded.

This new company continues with the three individual types of production until today. In 2002 Metax® became a registered brand that is renowned worldwide for the quality production of motor pumps and plants of the geotechnical division.

The history of Cima S.p.A. is the result of two friends' passion, which continues to inspire innovation in medium-heavy carpentry, special fittings, oil & gas, specialised construction and the cement industry.

QUALITY

Cima S.p.A. Quality Management System is approved to **ISO 9001:2015** by Bureau Veritas for:

- Design, production and support service of motor-pumps for cement mixtures and drilling muds
- Design, production and support service of automated batching plants systems for preparation of cement-based and bentonite-based mixtures
- Design and production of metal work for machinery, pressure vessels, pipes and butt-welded fittings in carbon steel, low-alloyed steel, stainless steel and non-ferrous metals
- Production of primary elements and accessories for flow and temperature measurements and systems for chemical sampling, insulating joints and valve bodies designed by third parties

In 2018, Cima S.p.A. received the Certification of Quality Management Systems for Welding according to **EN ISO 3834-2:2005**.

It's the primary objective of Cima S.p.A to further invest in quality and continue to be a renowned and reliable partner for Italian and international clients.

CARPENTRY AND SPECIAL FITTINGS DIVISION

Medium-heavy carpentry

Thanks to know-how developed throughout fifty years of activity, Cima S.p.A. focuses on the bespoke production of special parts for plants. The company caters for all requests including requirements for local and international client specification.

Special fittings

Cima S.p.A. is specialised in the production of manufactured goods composed of calendered and welded metal sheets in accordance with different international regulations and client specifications in the oil & gas, petrochemical, offshore and energy sectors. Materials used for the production of special fitting, range from standard carbon steel for low temperatures to steel for boilers and pressure vessels, steels for oil & gas pipelines, to stainless steel for nickel alloys.

PARTNERS AND PROJECTS

The company closely collaborates with long standing partners and has a history of successful projects ranging from the development of structures required for salvage projects, e.g. Costa Concordia wreck removal, platform building and carpentry for machinery and plants.

METAX[®] - Geotechnical and Petrochemical Division

Metax[®] trademark is synonymous with quality, productivity and reliability.

Metax[®] division is highly specialized in the construction of high-pressure pumps for jet grouting applications, pumping of drilling muds and transfer of liquid in general and the production of mixing plants, mixture store tanks, injection pumps for specialised civil engineering and geotechnics.

Metax[®] division provides consistent technical support to clients anywhere in the world. The specific geotechnical consultancy support helps clients to choose drilling and injection systems, provides information about the type of equipment to use and give support in managing building sites; including start-up and, where necessary, in-house training.

Thanks to investment in personnel, strong leadership and an innovative approach to key industries, **Metax[®]** continues to be at the forefront of the geotechnical market and the future holds new real estate investments, new products and new services.

Global Co-operation

Metax®, the technological division of Cima S.p.A., has not only a well-established Italian market but an even more robust presence worldwide.

The products of Metax® are well-known all over the world, as it avails itself of a long experience with key partners and customers in the field of soil consolidation, specialized civil engineering and geotechnics.

Co-operation with important companies has been implemented, thanks to an extensive network of dealers through which, Metax® geotechnical division has partnerships on a worldwide level.
